Dust-bin for public spaces - GHOST by Raffaele Lazzari

The GHOST litter bin, particular!/ aesthetically pleasing and with high technical detail, is constructed from two cost aluminium (UNI 7396/3) half-shells with a total capacity of 110 litres. One of the two half-shells is fixed with three

appropriate bolts to a 70mm high oval concrete base, whilst the mewing part is hinged to the fixed part with two 0 10mm stainless steel pivots. The slam lock guarantees an easy and convenient locking system without relying on keys. A stainless steel ring is positioned inside the litter bin which allows plastic waste sacks to be removed and replaced easily. The litter bin, upon request and subject to a surcharge, can be provided with one or two stainless steel plates showing the name of the local authority or council, fixed to the structure with screws. Height: 1 150mm, width: 605mm, depth: 400mm.
